

SIJ-320UV · UJV55-320 option

Soft-media Transportation Kit

Stable, continuous soft-media printing broadens the scope of work

By attaching the soft-media transportation kit to the SIJ-320UV/UJV55-320 printer, it is possible to print on soft media. This has been difficult until now because of the creases that often form when the media moves through the printer. The soft-media transportation kit's stretch roller and tension bar reduce the occurrence of creases and thereby provide stable movement of media. This enables high-quality printing on soft media such as thin tarpaulin, soft polyvinyl chloride (PVC), polyester banners, and curing sheets.

Media used to evaluate transportation	Tarpaulin (DELUN 510B) Soft PVC (DELUN 4025A) Polyester banners (A. Berger Revolution FR) Curing sheet (Kuraray Cluster-KE-200)
External dimensions (unit only)	W 4,430 × D 1,120 × H 910 mm (package size)
Weight (unit only)	Approximately 100 kg
Attachment	The soft-media transportation kit needs to be attached by our service staff.

* When using media other than those shown above, some adjustments, e.g., changing the load on the tension bar, will be necessary. Depending on the media, the accuracy of the performance may not fit within our warranty guidelines.

* After attaching the soft-media transportation kit, mountable media types for the SIJ-320UV/UJV55-320 printer are not changed.
